LEARN MORE ABOUT OUR TOLL BLENDING SERVICES

What is Toll Blending?

Toll blending, also called contract manufacturing or contract blending, is process in which the production of lubricants blending is outsourced. Our technical team can take your formula, raw materials, and packaging and turn it into a finished product, ready for shipping. DFLNL specializes in toll blending and packaging of both Automotive & Industrial lubricants from bulk packaging to small retail packages of up to 500ml as well.

Confidentiality

Prior to discussing specifics of any toll blending project, a mutual non-disclosure confidentiality agreement will be signed by both parties. This will protect any type of confidential and proprietary information.

OUR CAPABILITIES:

Lubricants blending & Filling.

We are equipped with a blending capacity of 36,000 Tons per annum with dedicated blending and holding tanks for different grades of lubricants. We are equipped with fully automated lines for filling & packaging for small containers. Also, we have online batch prints & quality monitoring systems, to ensure the right tracking and control over quality & performance of the packed goods. Various package filling lines are available from 500ml / 1 litre / 4 litre / 5 litre / 20 litre / 25 litre, Drums, IBC, and bulk tankers. In house storage tank capacity of 6 million liters.

Why DFLNL?

At DFLNL, we offer the most sophisticated toll blending services amongst the region's leading toll blending companies. Our honed expertise in manufacturing top-of-the-line lubricants can help your business develop premium-quality products. Lubricant manufacturing is a highly labour, capital, and resource-intensive process, You need to establish control measures and right equipment. The operation requires tedious research and development to produce high-quality products. Ultimately, you need to obtain ISO certifications.

Here is why we think you should opt for our services in toll blending,

- **No need to establish expensive capital outlay.**

The most prominent benefit of DFLNL toll blending is the lower upfront cost since it is a less capital-intensive venture for our clients. With lubricant toll blending, you can get professionally procured lubricants without having to invest in developing expensive outlay. This saves time and money in setting up a production facility with all the needed equipment and machinery. Meanwhile, you can invest your capital for increment expansion of your business without incurring a high level of debt.
- **Special benefit for companies with irregular production cycles.**

It is especially beneficial for companies which produce their lubricant products seasonally. In such cases, additional investment in equipment is not desirable, however extra production is needed for the season. Also, if you are testing out a few sample batches then it would be wise to contract the services of a toll manufacturer.
- **A better chance for you to rise above the competition.**

We know that it can be very difficult to meet the ever-rising production needs, due to the complex business systems and competitive market right now. So, if you want to deliver high-quality products on schedule, then toll blending can really help you meet your targets; you can effectively concentrate your efforts on developing more effective methods of doing business.
- **Develop better product design.**

When you save up on capital, you get the space and resources to focus on all other aspects of your business: improving product design, driving sales, raising funds, building partnerships, developing better marketing strategies, etc.,
This can even work to optimise your product development speed. As professional toll manufacturers, we get to focus all our efforts on improving the quality of your specialty lubricants. Meanwhile, you get to innovate your product lines, and produce new and exciting products in your product line-up!
- **Greater control without having to experience the hassle.**

With toll blending, you have the ability to manage and effect greater control over your product design to develop better, more competitive product design that deliver excellent results.
- **Ensure high-quality production every time from certified manufacturer.**

When you choose DFLNL toll blending and packaging, you get access to experts who have years of experience in the field of automotive and industrial lubricant product research.
- **Delta Fuel & Nigeria Limited is and ISO 9001 certified company for Quality Management System.**

Our experienced staff can match equipment and quality control systems to virtually every mixing need, for various range of lubricants. As we oversee the maintenance of regulatory issues and quality control throughout the operation, we ensure that you get high-end lubricants every time. More than anything though, we pride ourselves on our customer service. We develop lasting relationships with our clients that are personal and at tuned to their interests. **Let's work together to take your business to the next level!**
